a From a skill slice to program search

b What becomes editable

Frozen executor f_θ across all scopes

A Skill text
Change s: instructions and procedure.
Keep runtime structure fixed ($q = 0$).

B Independent components
Allow memory, action, or receipt code.
One independent component per round.

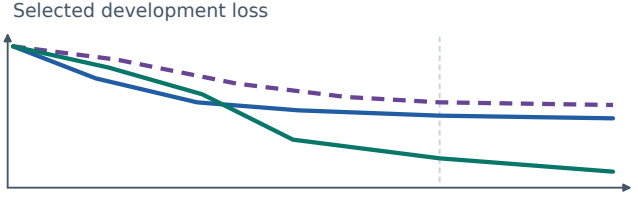

C Coordinated mechanisms
Edit shared state and dependencies.
One recorded fact informs multiple hooks.

$$\mathcal{H}_A \subseteq \mathcal{H}_B \subseteq \mathcal{H}_C$$

More degrees of freedom for repair

c When does a larger edit space pay off?

HYPOTHESIS

Skill-only search
Wider space · less capable improver
Wider space · more capable improver

Separate budget axes

Proposals · environment rollouts · improver tokens

Use held-out success to test the interaction.
