a A shared DSH lifecycle exposes editable hooks

Search evidence
Incumbent source + execution traces

→

Improver
Writes code and configuration

→

DSH host
Loads the candidate for each task

Task setup — Initialize state
Context — Assemble input
Solver — Propose action
Action gate — Allow or block
Environment — Execute action
Tool feedback — Read and annotate

Diamonds mark plugin hooks

Circles mark the solver and environment

Native scorer fixed

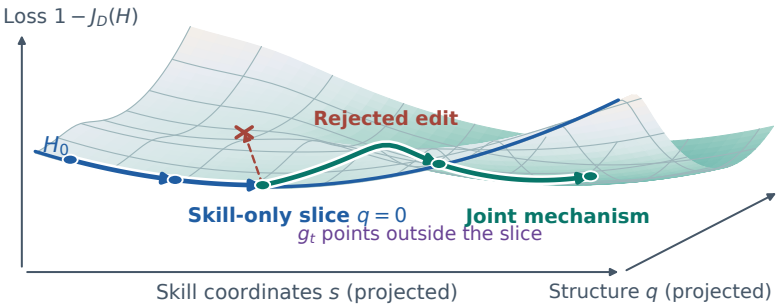

b Scale which surfaces can change and how they connect

	Instructions	Episode state	Action control	Tool feedback
A Skill text Fixed runtime	● Skill patch	—	—	—
B Independent edits One slot per proposal	○ Skill patch	○ Local memory	○ Action check	○ Receipt policy
C Coordinated edit Hooks share a task fact	● Next context	● Shared fact	● Action guard	● Receipt observer

C: writes from tool evidence; reads; reads

c A repair direction can leave the Skill-only slice

SCHEMATIC

Expressivity

Fixed structure confines text search.
New dependencies open new repairs.

Discovery at matched budget

Compare $Y_{M,C} - Y_{M,B}$ across improvers.

Track activation, repairs and regressions.

Report held-out success and search cost.
