What the harness does

>_ **OSBench** **41.67%**

Filesystem task instructions

Injected through system-prompt/assemble

Task interpretation

Path · recursion · filter · unit

File / line selection

find · grep · global deduplication

Time and size handling

Timestamp parsing · consistent units

Execution and submission

Inspect errors · call answer_action

Prompt + skill → **Qwen → shell tools** → **answer_action**

How its parts work

Interpret

Instruction groups

Exact directory / path
Recursive vs local selection
File pattern and filters
Count / sum / unit

Inspect unknown formats
Preserve requested scope

Compute from evidence

Instruction groups

find: regular-file selection
grep: lines vs occurrences
sort -u: global uniqueness
Timestamp parsing
Consistent size units

Read error diagnostics

Concrete generated guidance

Count matching lines once; keep filename prefixes out of values.
After an error, correct the failed selection or parsing assumption.

Invoke the tools

system-prompt/assemble

config.skill → text section
Section order: 90
Frozen Qwen3-4B

Native execution

Run shell tools
Inspect observed outputs
Call answer_action

Installed composition at this checkpoint

```
create(state) returns []; the learned content is config.skill
```
